

Cloud-based technology that adheres to world-class security and patient privacy standards.

Templated forms provide prompts and ensure that key clinical information is connected, minimizing risk and enhancing data for reporting and analytics.

Secure and direct communication channel between referring physicians regardless of location, and whether they use the same EMR or Care Management System.

Ability to track patients through the referral process to confirm patient adherence, and instantly receive post-consultation feedback - closing the loop.

Digital, longitudinal patient records and clinical communications, that provide an easily accessible electronic audit trail.

Clinical data provides insights to strengthen referral networks to build your business.

Integrates with leading-edge image management solutions, streamlining the secure sharing of high resolution images.

- CMS Interoperability Compliance Solved
- Clinical communications that create a cloud based, longitudinal patient record.
- Allows for the medical history and imaging to be shared in 2 clicks.
- Returns signed finding reports and imaging to the referring eye care professionals in seconds, not days.
- Gives authorized persons in a patient care team the flexibility to manage workflow dynamically regardless of EHR, location or device.
- Secure and HIPPA compliant.

Medical History and Imaging Shared in 2 Clicks
